

AI for Office Automation

DAY 2 — TASKS WORKBOOK

Session Duration: 4 Hours | 12 Tasks | Individual & Pair Exercises

Participant Information

Name:		Date:	10 September 2026
Job Title:		Department:	

Session Schedule

Time	Section	Tasks	Focus
0:00 – 0:50	A — Workflow Design	Tasks 1–2	AI workflow thinking + IPO design
0:50 – 1:40	B — Prompt Engineering	Tasks 3–5	Role-based prompts + structured outputs + constraints
1:40 – 2:40	C — Communication	Tasks 6–8	Email chains, executive memos, meeting minutes, tone
2:40 – 3:40	D — Reports & Documentation	Tasks 9–11	Multi-doc analysis, executive summaries, SOPs, slides
3:40 – 4:00	E — Workflow Planning	Task 12	Personal AI workflow plan for Day 2 topics

■ Blue tasks = General business

■■■ Purple tasks = Developer-specific

■ Teal tasks = Mixed / choose your path

Completed practice answers in simple English. Add your name, job title and department. Time savings and work examples are estimates. The Explanation Guide was not supplied, so the formats follow the workbook checklist and standard headings. Ratings refer to the sample outputs in this copy.

SECTION A AI Workflow Design — Input → Process → Output

TASK 1 Design an AI Workflow from Scratch

■ 25 min

● Beginner

■ Instructions

1. Choose ONE recurring task from your daily work (or use the example below).
2. Fill in the IPO Workflow Design table below.
3. Write a CRTFC prompt for the AI Process step.
4. Test the prompt and evaluate the output.
5. Identify what you would add to improve the workflow.

Example Task (or choose your own):

You receive raw bullet-point notes after every client call. Currently you spend 20–30 minutes writing these up into a structured call summary for your CRM and manager. Design an AI workflow to automate this.

Step 1 — IPO Workflow Design Table

Step	Your Workflow Design	Questions to Answer
INPUT	Short client-call notes with dates, requests and agreed actions. Remove private details first.	What notes and file format do you start with?
PROCESS	Use ChatGPT with a CRTFC prompt, then one follow-up to clarify missing details.	Which AI tool and prompt approach will you use?
OUTPUT	A call summary for the CRM and manager: decisions, actions, owners and dates.	What format is needed, and who will use it?
REVIEW	I check names, commitments and deadlines against my notes. Allow five minutes.	Who checks the result, and how long will it take?

Step 2 — Write Your CRTFC Prompt for the Process Step

Element	Question	Your Answer
Context	What is the situation? Who are you?	I write client-call summaries from rough notes.
Role	Who should AI act as?	Act as a project assistant.
Task	What exactly do you want?	Turn the supplied notes into a clear call summary.
Format	How should the output look?	Headings: Summary, Decisions, Actions and Open Questions.
Constraints	Any limits, tone, exclusions?	Under 120 words; use only notes; flag missing owners or dates.

Step 3 — Paste Your Combined Prompt Here (write it out in full):

Act as a project assistant. I need a CRM summary from these sample call notes: client asked for a product demo next week; I will send available times tomorrow; no date was agreed. Use Summary, Decisions, Actions and Open Questions. Stay under 120 words. Do not invent a date or commitment. Mark missing details clearly.

Step 4 — Test it and rate the output:

4 / 5 - Very Good

Step 5 — What would you add or change to improve this workflow?

I would add a required check for each owner and due date before saving the summary. I would also keep one approved template so every call is recorded in the same format.

Sample output

Summary: The client would like a product demo next week.

Decisions: No demo date has been agreed.

Actions: I will send available times tomorrow.

Open Questions: Which day and time will the client choose?

Review: The output keeps the agreed action and does not invent a booking.

TASK 2 Identify Your Top 5 Automation Opportunities

■ 25 min

● Beginner

■ Instructions

1. List your 5 most repetitive or time-consuming writing/communication tasks.
2. For each task, estimate the time it currently takes and the time AI could save.
3. Score each task on automability (1=hard to automate, 5=easy to automate).
4. Circle your top 3 tasks — these become your personal workflow priorities.
5. Share your top choice with the group and explain why.

My Top 5 Repetitive Tasks — Automation Opportunity Audit

Task Description	Current Time	AI Time Saved	Automability (1–5)	Priority?
Client-call summaries	25 min	15 min	5	Yes
Weekly status reports	40 min	25 min	4	Yes
Meeting minutes	35 min	20 min	5	Yes
Routine email replies	15 min	8 min	4	No
Presentation outlines	45 min	20 min	3	No

My top automation opportunity (explain why it was chosen and what the ideal output looks like):

My top choice is weekly status reports. A clear draft could save about 25 minutes per report. The ideal output shows completed work, current work, blockers and next steps in a short table. I would check all figures and dates before sharing it.

What context would AI need that it doesn't currently have?

AI needs the actual team updates, the reporting period, the audience and our approved format. It also needs confirmed owners and deadlines. It should not guess missing information. All time estimates above are per task, including a short review.

SECTION B

Advanced Prompt Engineering — Roles, Outputs & Constraints

TASK 3 Role Upgrade — Rewrite 4 Weak Roles

■ 20 min

● Beginner

■ Instructions

1. Each row below has a weak role assignment.
2. Rewrite each as a strong role (include seniority, domain, and audience).
3. Test one strong role and compare its output quality against the weak version.
4. Note: which dimension (seniority / domain / audience) made the biggest difference?

#	Weak Role (Do Not Use)	Your Strong Role Rewrite	What You Added
1	You are a writer.	Act as a senior customer-service writer explaining delivery updates to clients.	Senior; customer service; clients.
2	You are a developer.	Act as a senior Python developer explaining a bug fix to junior developers.	Senior; Python; junior developers.
3	You are an expert.	Act as a senior operations analyst summarizing service delays for managers.	Senior; operations; managers.
4	You are helpful.	Act as a senior HR assistant writing onboarding steps for new employees.	Senior; HR; new employees.

Which dimension (seniority / domain / audience) had the biggest impact on output quality? Why?

Audience made the biggest difference. Writing for a client made the message clearer and more useful than asking for general writing.

Rate the difference between weak and strong role output:

4 / 5 - Very Good

Comparison test: Explain a sample two-day delivery delay.

Weak role - "You are a writer": The delivery has been delayed by two days.

Strong role: I am sorry your delivery is two days late. The expected arrival is now two days after the original date. Please let us know if this affects your plans.

Observation: The stronger role adds a suitable tone and considers the reader. I would still confirm the exact date before sending.

TASK 4 Build a Structured Output Prompt

■ 20 min

● Intermediate

■ Instructions

1. Choose one of the three scenario options below.
2. Complete the full CRTFC table for your chosen scenario.
3. Write the combined prompt with a structured output specification.
4. Test the prompt. Evaluate whether the output exactly matches your specification.
5. Write one follow-up turn to refine the output.

Choose Your Scenario:

■ Scenario A

Write a weekly team status report as a structured Markdown table with sections: Completed / In Progress / Blockers / Next Week.

■■■ Scenario B

Generate a code review report for a Python function, formatted as numbered issues each with Severity (H/M/L), Description, and Suggested Fix.

■ Scenario C

Create a multi-document comparison table analyzing two different approaches to a problem of your choice (one row per criterion).

I chose Scenario: A - weekly team status report.

Element	Question	Your Answer
Context	What is the situation? Who are you?	I prepare a weekly update from four sample team notes.
Role	Who should AI act as?	Act as a team coordinator.
Task	What exactly do you want?	Organize the notes into a weekly status report.
Format	How should the output look?	Markdown table: Section Update Owner Next Action.
Constraints	Any limits, tone, exclusions?	Exactly four rows; no invented owners or deadlines.

My Structured Output Specification (describe exactly what format you want):

Format Type	Table - Markdown
Exact Columns / Keys / Sections	Section Update Owner Next Action
Length / Quantity Constraint	Four rows: Completed, In Progress, Blockers, Next Week.

My Combined Prompt (CRTFC + Output Specification):

Act as a team coordinator. Turn these sample notes into a Markdown table with Section, Update, Owner and Next Action: Sara finished the user guide; Ali is testing the form; the team is waiting for client feedback; next week we plan a demo. Use exactly four rows: Completed, In Progress, Blockers and Next Week. Use "Not stated" for missing owners or actions. Do not add dates.

My Follow-Up Turn (to refine the output):

Keep the same four rows. Shorten each Update cell to eight words or fewer. Keep missing details as "Not stated".

Rate how closely the output matched your specification:

5 / 5 - Matches all four columns and rows

Refined output (rendered from the Markdown table):

Section	Update	Owner	Next Action
Completed	User guide finished	Sara	Not stated
In Progress	Form testing	Ali	Not stated
Blockers	Waiting for client feedback	Not stated	Not stated
Next Week	Demo planned	Not stated	Not stated

Format check: Four named columns and four data rows are present. Every Update cell is within eight words. Unknown owners and actions are clearly marked.

TASK 5 Constraint Engineering Practice

■ 20 min

● Advanced

■ Instructions

1. Read each weak prompt below — identify which constraints are missing.
2. Rewrite with at least 3 explicit constraints added.
3. Test the rewritten version and evaluate the improvement.
4. BONUS: add a constraint that forces the AI to flag uncertainty.

Prompt 1 — Weak (Do Not Use As-Is)

Summarize this meeting.

Missing: length, sections and treatment of missing details.

Rewrite: Summarize the Task 8 notes in under 120 words. Use Decisions, Actions and Blockers. Preserve names and deadlines. Write "Not stated" for missing information.

Prompt 2 — Weak (Do Not Use As-Is)

Write a report about our Q3 performance.

Missing: sources, audience, length and evidence.

Rewrite: Use only the two Q3 documents in Task 9. Write for management in under 200 words. Use Progress, Problems and Next Steps. Cite Doc 1 or Doc 2 and label any inference.

Prompt 3 ■■■ — Weak (Do Not Use As-Is)

Review this code and fix any issues.

Missing: language, scope, format and verification.

Rewrite: Review supplied Python 3 code for bugs. Keep its public interface and add no dependencies. List each issue and a minimal fix. If code is missing, ask for it; do not claim tests ran.

Which constraint type had the biggest impact on output quality?

4 / 5 - Source limits helped most

Source limits had the biggest impact because they stopped unsupported details.

Test notes: The meeting version flags missing dates. The Q3 version separates facts from suggestions. No code was supplied for the third prompt, so its correct response is to request the code.

Bonus constraint used: Flag uncertainty instead of guessing.

SECTION C

AI for Professional Communication

TASK 6 Email Chain — Draft a Professional Reply

■ 25 min

● Intermediate

■ Instructions

1. Read the email thread scenario below.
2. Complete the CRTFC table for your reply strategy.
3. Write and test your prompt. Evaluate the result.
4. Ask AI to produce two alternative tone versions (formal and direct).
5. BONUS: paste a real email thread from your own work (anonymize first).

Email Thread Scenario:

THREAD: Project Timeline Delay

From: Sarah (Client) — "We were expecting the first deliverable by end of this week. Our team has scheduled a board presentation based on this. Can you confirm it is still on track?"

From: Ahmed (Your Manager, internal) — "There is a 5-day delay due to a dependency on the data team. We haven't told the client yet. You need to communicate this professionally."

Your task: Draft a professional reply to Sarah acknowledging the delay, providing a revised date, and offering to reschedule her board presentation if needed.

Element	Question	Your Answer
Context	What is the situation? Who are you?	I am the project contact replying to Sarah about a five-day delay.
Role	Who should AI act as?	Act as a calm, professional project manager.
Task	What exactly do you want?	Acknowledge the delay, give a revised date and offer scheduling help.
Format	How should the output look?	Short email: subject, greeting, explanation, next step and sign-off.
Constraints	Any limits, tone, exclusions?	No blame. Sample dates: 11 to 16 September; five calendar days.

My Full Email Prompt:

Act as a project manager and reply to Sarah using the thread. Apologize for the five-day delay caused by a data dependency. For this practice example, assume the original deadline is 11 September and the new date is 16 September. Explain the impact and offer to help reschedule her board presentation. Keep the email professional and under 120 words.

AI Generated Email (paste result or take notes):

Subject: Updated delivery timeline

Hi Sarah,

I am sorry, but the first deliverable is delayed by five days because of a data dependency. The revised date is 16 September. I understand this affects your board presentation. If needed, I can help coordinate a new presentation date with your team. Please let me know what works best.

Kind regards, Project Team

Rate the email quality:

4 / 5 - Very Good

What changes did you make before you would send this email?

Before sending, I would confirm the actual original deadline, whether the delay means calendar or working days, and the revised date with Ahmed. The 11 and 16 September dates are practice assumptions. I would also check that the offer of scheduling help is practical.

Formal version

Prompt: Rewrite the reply in a more formal tone, keeping the same facts.

Subject: Revised first-deliverable date

Dear Sarah,

Please accept my apologies for a five-day delay to the first deliverable due to a data dependency.

Delivery is now expected on 16 September. I understand the impact on your planned board presentation and would be happy to help coordinate a revised date if required. Please advise how we can best support your team.

Kind regards, Project Team

Direct version

Prompt: Make the reply direct and concise without sounding rude.

Subject: Delivery now expected on 16 September

Hi Sarah,

The first deliverable will be five days late because of a data dependency. We now expect delivery on 16 September. I am sorry this affects your board presentation. If you need to move it, I can help coordinate a new date. Please let me know.

Regards, Project Team

TASK 7 Write an Executive Memo Using AI

■ 25 min

● Intermediate

■ Instructions

1. Choose one of the two memo scenarios below.
2. Use the Executive Memo Template structure from the Explanation Guide.
3. Write your CRTFC prompt and test it.
4. Verify: does the AI lead with recommendation or build up to it?
5. If it builds up to it, add a constraint and re-test.

■ Memo Scenario A

Your IT department wants to migrate from on-premise servers to cloud. Write an executive memo to the CEO recommending approval. Budget impact: 15% cost reduction. Timeline: 6 months. Risk: 2-week migration window.

■■■ Memo Scenario B

Your engineering team wants to adopt TypeScript for all new services (currently JavaScript). Write an executive memo to the CTO recommending approval. Benefits: type safety, fewer runtime errors. Timeline: 3-month migration. Risk: team upskilling.

I chose Scenario: A - cloud migration.

Element	Question	Your Answer
Context	What is the situation? Who are you?	IT wants to move on-premise servers to cloud.
Role	Who should AI act as?	Act as an IT manager writing to the CEO.
Task	What exactly do you want?	Recommend approval; cover 15% savings, six months and migration risk.
Format	How should the output look?	Header, recommendation, three rationale bullets and next-steps table.
Constraints	Any limits, tone, exclusions?	Under 300 words; recommendation first; proposed owners/dates marked.

Quality Checklist — Verify Your Executive Memo

- Leads with RECOMMENDATION (not situation)
- TO / FROM / DATE / SUBJECT header present
- RATIONALE has 3–4 bullet points
- NEXT STEPS table has Action / Owner / Deadline
- Under 300 words
- No jargon (or appropriate for audience)

TO: CEO | FROM: IT Manager
DATE: 10 Sep 2026 | SUBJECT: Cloud move
Recommendation: Approve a six-month cloud migration.
Rationale:
- Expected cost reduction: 15%.
- Six months allows a phased move.
- A planned window supports testing.
Risk: disruption in the two-week migration window. Plan rollback.

Next step*	Owner*	Deadline*
Approve plan	CEO	Week 1
Check readiness	IT lead	Month 1
Test and move	IT team	By Month 6

*Proposed steps, owners and deadlines.

Rate the executive memo quality:

4 / 5 - Clear recommendation and next steps

TASK 8 Meeting Minutes + Tone Adaptation

■ 20 min

● Intermediate

■ Instructions

1. Use the raw meeting notes below to generate structured meeting minutes.
2. Use the Meeting Minutes Template from the Explanation Guide.
3. Then take your minutes output and adapt it for TWO different audiences.
4. Compare how differently the same information reads in each version.

Raw Meeting Notes — Sprint Planning Session:

Date: Monday. Attendees: Ali (PM), Reem (Dev Lead), Omar (Backend), Fatima (QA), Nour (Design).
Discussed Q4 sprint goals. Ali says we need to ship the payment module by end of month — hard deadline from client.
Omar said backend API is 70% done but auth integration has a blocker — waiting for the security team to sign off on OAuth config. Estimated 3 days delay if not resolved by Wednesday.
Fatima raised concern: QA hasn't been involved early enough. Bugs found late. Suggested QA joins sprint planning from now on. Everyone agreed.
Nour showed updated UI mockups. Approved. Minor change requested to the checkout flow — needs one more revision.
Decisions: Ship payment module Nov 30. QA joins sprint planning. Omar to escalate OAuth issue to security team today.
Next meeting: Wednesday standup to check on OAuth blocker.

My Meeting Minutes Prompt:

Act as a meeting secretary. Use the supplied Monday notes to write minutes with Attendees, Decisions, Actions, Blockers and Next Meeting. Keep November 30 as the delivery deadline. Preserve relative dates; do not guess the year. Mark missing owners and due dates.

Minutes Result (key sections — Actions & Decisions):

Decisions: Deliver the payment module by Nov 30; QA joins sprint planning; UI mockups approved, with a checkout revision still needed.
Actions: Omar escalates OAuth to security today. Nour revises checkout; deadline not stated.
Blocker: OAuth approval; possible three-day delay if unresolved by Wednesday. Next meeting: Wednesday standup.

Tone Adaptation — Rewrite for Two Audiences:

Attendees: Ali (PM), Reem (Dev Lead), Omar (Backend), Fatima (QA), Nour (Design).
Review: "Monday", "today" and "Wednesday" are kept as written because no calendar date or year is supplied. Joining planning is a decision; the organiser is not named.

Audience 1: CEO (non-technical, 100-word summary)	Audience 2: Engineering Team (technical, action-focused)
Prompt: Rewrite the minutes for the CEO in exactly 100 words. Focus on delivery, risk and decisions; avoid technical jargon. Output notes: Full summary below.	Prompt: Rewrite for engineers with actions, owners, dependencies and deadlines. Keep OAuth and API detail. Output notes: Technical action list below.
Which audience version required more editing? Why?	4 / 5 - CEO version needed more editing

The CEO version needed more editing to remove technical detail while keeping the delivery risk clear.

CEO summary - 100 words

The payment module is due on November 30. The backend is 70% complete, but security approval is blocking the login connection. If this is not resolved by Wednesday, work could be delayed by three days. Omar will raise the issue with security today. The team agreed that QA will join sprint planning to find bugs earlier. The updated designs were approved, although the checkout flow needs one more revision. The team will review the security blocker at Wednesday's standup. The main priority is to resolve this dependency and protect the agreed delivery date without losing focus on quality and testing.

Engineering version

- Deadline: payment module ships Nov 30. Backend API is 70% complete.
- Omar: escalate OAuth configuration approval to security today.
- Dependency: security sign-off is needed for auth integration; owner within security not stated.
- Risk: estimated three-day delay if unresolved by Wednesday.
- QA joins future sprint planning; scheduling owner not stated.
- Nour: revise the checkout flow; due date not stated. Other UI mockups are approved.
- Next check: Wednesday standup.

SECTION D

AI for Reports & Documentation

TASK 9 Multi-Document Analysis

■ 25 min

● Intermediate

■ Instructions

1. Read the two mini-documents provided below.
2. Write a prompt to synthesize both into a consolidated analysis.
3. Request: Executive Summary + Key Themes Table + Top 3 Insights with citations.
4. Evaluate: did AI correctly cite which document each insight came from?
5. BONUS: add a third document from your own work.

Document 1 — Q3 Customer Feedback Survey Summary:

Total responses: 87. Overall satisfaction: 3.6/5.

Top positive themes: fast onboarding (mentioned 34 times), responsive support team (28 times), clean interface (22 times).

Top negative themes: slow report generation (41 times), missing bulk export feature (38 times), mobile app crashes (27 times).

NPS score: +12. Most common suggestion: 'Make the dashboard load faster — it takes 8-10 seconds on average.'

Document 2 — Q3 Engineering Performance Report:

Sprint velocity: average 42 story points (target was 50). 3 out of 4 sprints delivered on time.

Key achievements: launched payment integration (2 weeks early), completed security audit with 0 critical findings.

Ongoing issues: report generation module is under-resourced — 1 engineer, 3 open bugs, last updated 4 months ago.

Tech debt: mobile codebase flagged as 'high risk' — last major refactor was 18 months ago.

Team highlight: QA integration into sprint planning (new process) — reduced late-stage bug discovery by 30%.

My Multi-Document Analysis Prompt:

Act as an operations analyst. Combine Doc 1 (customer survey) and Doc 2 (engineering report) into an Executive Summary, a Key Themes table and exactly three insights. Cite [Doc 1] or [Doc 2] next to every fact. Separate suggestions and inferences from findings. Flag direct conflicts or say none found. Do not treat related problems as proof of cause.

Results Evaluation:

Evaluation: The analysis keeps the figures and uses the right document labels. The reporting and mobile problems appear in both sources, but the documents do not prove their causes. No direct contradiction was found.

Check	Did AI do this?	Notes
Produced an Executive Summary	Yes	Summary is included below.
Created a Key Themes table	Yes	Four themes are compared.
Cited sources for each insight	Yes	Each insight names its source.
Flagged any conflicts between docs	N/A	No direct contradiction found.
Stayed within requested format	Yes	All three sections are present.

What prompt change would improve the citation or theme detection?

Add: Cite each factual clause separately. Use a theme name that matches the evidence. If two issues may be connected, label that as an inference and say what still needs checking.

Executive Summary

Prioritize report performance and mobile reliability as suggested focus areas. Customers report slow reports (41 mentions) and mobile crashes (27) [Doc 1]. Engineering lists an under-resourced report module and a high-risk mobile codebase [Doc 2]. Bulk export is another customer request (38 mentions) [Doc 1]. Early QA participation is linked to 30% fewer late-stage bug discoveries [Doc 2]. These findings suggest areas to investigate, not confirmed root causes.

Theme	Customer evidence	Engineering evidence
Reporting	41 slow-report mentions [Doc 1]	1 engineer; 3 bugs; updated 4 months ago [Doc 2]
Mobile	27 crash mentions [Doc 1]	High-risk code; refactor 18 months ago [Doc 2]
Bulk export	38 missing-feature mentions [Doc 1]	No matching detail [Doc 2]
Quality	Support praised 28 times [Doc 1]	Early QA reduced late bug discovery 30% [Doc 2]

Top 3 Insights

- Report speed deserves attention: 41 complaints [Doc 1], with one engineer and three module bugs [Doc 2]. Limited capacity may contribute; this is an inference.
- Mobile reliability needs investigation: 27 crash mentions [Doc 1] align with high-risk code [Doc 2]. A causal link is not proven.
- Keep early QA involvement: late bug discovery fell 30% [Doc 2]. Customer satisfaction is 3.6/5 [Doc 1], but the survey does not measure QA's effect on satisfaction.

**TASK
10****Write an Executive Summary**

■ 25 min

● Intermediate

■ Instructions

1. Use the combined content from Task 9 (both documents) as your source.
2. Write a prompt for an executive summary using the strict structure from the Explanation Guide.
3. Test with a 200-word limit, then a 100-word limit — compare the two results.
4. Verify: does the recommendation appear first?
5. Check: did AI add any information NOT in the source documents?

Element	Question	Your Answer
Context	What is the situation? Who are you?	I need to brief management on the two Q3 documents.
Role	Who should AI act as?	Act as an executive communications assistant.
Task	What exactly do you want?	Summarize the customer and engineering findings.
Format	How should the output look?	Recommendation, Evidence, Risks and Next Steps.
Constraints	Any limits, tone, exclusions?	Max 200 words, then 100; no new facts; label advice as proposed.

My Executive Summary Prompt (200-word version):

Write an executive summary of both Q3 documents for management. Start with a recommendation, then use Evidence, Risks and Next Steps. Use at most 200 words. Include only supported facts; label next steps as proposals. Then produce a version within 100 words using the same structure. Keep the key figures accurate and do not invent owners, budgets or dates.

Side-by-Side Comparison:

200-Word Version — Key Differences	100-Word Version — Key Differences
200-word limit: More detail on customer themes, delivery results and QA. Recommendation: First. New facts: No; proposals labelled. Most useful: Evidence and next steps.	100-word limit: Faster to read, with fewer supporting figures. Recommendation: First. New facts: No; proposals labelled. Most useful: The main recommendation.

Which word limit produced the more useful executive summary? Why?

The 200-word limit is more useful for a management review because it explains why the priorities matter. The 100-word version works better as a quick email introduction. Both keep the recommendation first. The separate Explanation Guide was not provided, so I used these stated headings.

**TASK
11****Convert a Report into a Presentation Outline**

■ 25 min

● Advanced

■ Instructions

1. Use the combined Q3 findings (Tasks 9–10) as your source report.
2. Write a prompt to convert it into an 8-slide presentation outline.
3. Specify: audience, goal, flow, and max 30 words per slide.
4. Evaluate: does the flow follow Hook → Context → Problem → Solution → CTA?
5. BONUS: ask AI to write speaker notes for slides 3 and 5.

Element	Question	Your Answer
Context	What is the situation? Who are you?	Management needs a briefing on the two Q3 reports.
Role	Who should AI act as?	Act as a presentation strategist for senior managers.
Task	What exactly do you want?	Create an eight-slide outline to agree improvement priorities.
Format	How should the output look?	Eight slides; title and short message; notes for slides 3 and 5.
Constraints	Any limits, tone, exclusions?	Max 30 words per slide; source facts only; label proposed actions.

My Report-to-Presentation Prompt:

Convert the Q3 findings into eight slides for management. The goal is agreement on improvement priorities. Follow Hook, Context, Problem, Problem, Solution, Solution, Evidence and CTA. Give each slide a title and message, together no more than 30 words. Cite Doc 1 or Doc 2. Mark proposed actions clearly. Add separate speaker notes for slides 3 and 5.

Slide Outline Evaluation:

Slide	AI-Generated Title	Under 30 words?	Flow Stage	Speaker Note?
1	Speed affects customers	Yes	Hook	No
2	Q3 customer snapshot	Yes	Context	No
3	Reporting bottleneck	Yes	Problem	Yes
4	Mobile reliability risk	Yes	Problem	No
5	Proposed reporting focus	Yes	Solution	Yes
6	Proposed mobile focus	Yes	Solution	No
7	Early QA is helping	Yes	Evidence	No
8	Agree next priorities	Yes	CTA	No

Rate the presentation outline quality:

4 / 5 - Clear flow; concise messages

Which slide needed the most editing? What was missing?

Slide 8 needed the most editing. The first draft said "improve performance" but did not say what decision was needed. I changed it to ask management to agree priorities and assign owners.

Eight-slide outline

1. Speed affects customers: 41 slow-report mentions and dashboard loads of 8-10 seconds show a clear pain point. [Doc 1]
2. Q3 customer snapshot: 87 responses; satisfaction 3.6/5; NPS +12. Fast onboarding, support and the interface received positive feedback. [Doc 1]
3. Reporting bottleneck: One engineer, three open bugs and no update for four months. Customer report complaints deserve investigation. [Doc 1; Doc 2]
4. Mobile reliability risk: Customers mentioned crashes 27 times. Engineering flagged high-risk mobile code, last refactored 18 months ago. [Doc 1; Doc 2]
5. Proposed reporting focus: Review capacity and the three bugs. Investigate report speed; assess the bulk export request separately. [Doc 1; Doc 2]
6. Proposed mobile focus: Investigate crashes and prioritize the highest-risk code. Keep QA involved early. These are suggested actions. [Doc 1; Doc 2]
7. Early QA is helping: Late-stage bug discovery fell 30%. Three of four sprints delivered on time; the audit found zero critical issues. [Doc 2]
8. Agree next priorities: Management should choose the reporting and mobile actions, assign owners and request a plan. Proposed decision; budgets and dates are not supplied.

Speaker note - Slide 3

The customer survey and engineering report both point to reporting problems. That supports investigation, but it does not prove that low staffing caused the slow reports. We should check the bottlenecks before deciding on a fix.

Speaker note - Slide 5

The next step is a proposed review of capacity and open bugs. Bulk export is a separate feature request, mentioned 38 times. Do not present a budget or delivery date because neither document supplies one.

SECTION E

Personal AI Workflow Plan — Day 2 Topics

TASK
12

Build Your Day 2 Personal AI Workflow Plan

■ 20 min

● Advanced

■ Instructions

1. Review the automation opportunities you identified in Task 2.
2. Map your top 5 tasks to Day 2 AI skills (workflow, communication, documentation).
3. For each task, identify the template you will use and estimate the time savings.
4. Choose your top 3 — these are your implementation priorities.
5. Prepare a 60-second pitch: 'I will use AI to automate [task] using [method], saving [time].'

My Day 2 AI Workflow Plan

Task / Deliverable	AI Skill (from Day 2)	Template to Use	Time Saved	Top 3?
Client-call summaries	IPO workflow	Call summary	15 min	Yes
Weekly status reports	Structured output	Status table	25 min	Yes
Meeting minutes	Communication	Minutes	20 min	Yes
Routine email replies	Tone adaptation	Email reply	8 min	No
Presentation outlines	Report conversion	8-slide outline	20 min	No
Not used - five tasks requested.				

My 60-Second Pitch (write it out — you will present this to the group):

I will use AI to draft weekly status reports from checked team updates. I will use the CRTFC status-table prompt with Completed, In Progress, Blockers and Next Week. I will check owners, facts and dates before sharing. I expect to save about 25 minutes per report. Call summaries and meeting minutes are my next priorities. One of each of the five tasks would save about 88 minutes in total.

Day 2 Final Reflection

Q1: Which communication or documentation task will save me the most time with AI?

Weekly status reports should save me the most time: about 25 minutes per report.

Q2: What was the most surprising result from testing prompts today?

A clear table format made rough notes much easier to review and reuse.

Q3: Which prompt technique (role, structured output, constraint, multi-turn) was hardest to master?

Constraints were hardest. I had to be specific without making the prompt too long.

Q4: What is the first AI workflow I will implement in my real work this week?

I will start with a weekly status report, using non-sensitive notes and a final human check.

Q5: What question do I still have about AI for professional communication or documentation?

How can I keep the same writing quality when several people use the same AI template?

■ Day 3 Preview — What to Expect

Day 3 covers the second half of AI for Office Automation: AI + Data Analysis (uploading CSV/Excel, cleaning, insights), Building Mini-Automations (reusable templates, sales summaries, feedback categorization), Introduction to No-Code Tools (Make, Zapier, n8n), and the Capstone Workflow Lab where you will build and present a full automation scenario. Bring a real dataset or process from your work to use in the Capstone Lab.
